

IWR-Plan Decision Support Software

Status:

In Progress

IWR Contact:

Shana Heisey (Shana.A.Heisey@usace.army.mil)

Purpose:

IWR has developed IWR-PLAN Decision Support Software to assist with the formulation and comparison of alternative plans. While IWR-PLAN was initially developed to assist with environmental restoration and watershed planning studies, the program can be useful in planning studies addressing a wide variety of problems.

Objective:

1)PLAN EDITOR: Allows for analysis on fully formulated alternatives; groups plan sets for easy organization; allows for modularization and potential future developments. 2)PLAN GENERATOR: Launches from the Plan Editor and maintains the existing analytical capabilities of the model; is a separable component. 3)GRAPHICS: Additional graphing options have been added to visualize analysis results, including a 3-D scatter plot and surface plot. 4)WEBSITE: The IWR-PLAN website is under revision to include additional information on the program and links to Corps studies that have successfully used IWR-PLAN.
